

ALL NEW TRANSISTOR

*At your
finger tips*

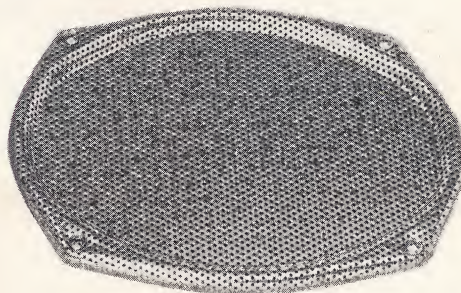

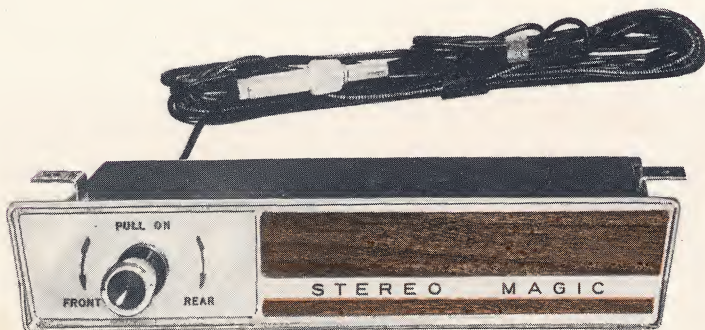

RANGER under-dash REVERBERATION

Stereo-Magic is a new improved reverberation unit offering the finest in sound reproduction. Installation is easier, faster and more convenient than ever before.

Unlike ordinary reverberation units which mount in the trunk of a car, the Ranger Stereo-Magic with control panel and transducer all in one compact unit . . . mounts under the dash . . . right at your finger tips. The speaker mounts in the rear of your car.

Ranger Stereo-Magic employs an electro-mechanical delay line with a transistorized amplifier and a rear deck speaker that is connected to your car radio. It is the nearest thing to Stereo. The reverberation sound is immediately delayed after the sound from the radio is heard, producing a "genuine" two source musical reproduction which has both the depth and quality of Stereo sound.

- New Design — small, neat, compact unit 1 5/8" high, 9" wide and 4" deep. Face plate is sparkling chrome with brushed aluminum and wood-grain brown walnut finish to fit in perfect harmony with the interior trim of all cars.
- Self-adjusting feature . . . designed to fit various angles on the dash panel.
- Easy to install — drill only 2 small holes.
- Single Unique Control Knob — Pulling the control knob out, places unit into reverb operation. The intensity of sound may be adjusted by this same single control. Also permits operations of rear seat speaker without reverberation by operating the front to rear fader command control.
- All transistor circuits . . . can be used with any AM or AM/FM car radio, using 12 Volt power.
- Safety design protects output transistors from damage due to accidental disconnection of rear seat speaker.

MODEL RR-13-R STEREO-MAGIC with 6" x 9" speaker and grill.
